

## *I2C LCD Library for I2C PCF8574 \ A*

This library uses the MikroC *I2C1*\_Library function, all the commands are a carbon copy of the MikroC Lcd\_Library,

The differences are as follows:

1. there is no need to define constant sbit's.
2. *I2C1* module is used in this library.
3. *I2C1* module must be configured independently.
4. All function arguments are *unsigned char* type.

### Library Routines

- *I2C*\_Lcd\_Init
- *I2C*\_Lcd\_Out
- *I2C*\_Lcd\_Chr
- *I2C*\_Lcd\_Cmd

|                     |  |
|---------------------|--|
| <b>I2C_Lcd_Init</b> |  |
| <b>Prototype</b>    | <b>void</b> Lcd_Init(unsigned char I2C_address);   |
| <b>Returns</b>      | Nothing.   |
| <b>Description</b>  | Initializes I2C_Lcd module to multi line no cursor.  |
| <b>Requires</b>     | Global variables: <ul style="list-style-type: none"><li>• I2C address of the the module to be defined as unsigned char must be defined before using this function.</li></ul> |
| <b>Example</b>      | <pre>Unsigned char LCD_01_ADDRESS = 0x7E; //0x7E is the address of                                      //PCF8574A with A0-2 at VSS  I2C_LCD_init(LCD_01_ADDRESS)</pre>      |

| I2C_Lcd_Out        |  |
|--------------------|--|
| <b>Prototype</b>   | <b>void</b> Lcd_Out( <b>unsigned char</b> row, <b>unsigned char</b> column, <b>unsigned char</b> *text);   |
| <b>Returns</b>     | Nothing.   |
| <b>Description</b> | <p>Prints text on Lcd starting from specified position. Both string variables and literals can be passed as a text.</p> <p>Parameters :</p> <ul style="list-style-type: none"> <li>• <b>I2C_address:the address of the I2C PCF8574 / A</b></li> <li>• <b>row:</b> starting position row number</li> <li>• <b>column:</b> starting position column number</li> <li>• <b>text:</b> text to be written</li> </ul> |
| <b>Requires</b>    | The Lcd module needs to be initialized. See <a href="#">I2C_Lcd_Init</a> routine.  |
| <b>Example</b>     | <pre>// Write text "Hello!" on Lcd starting from row 1, column 3: <b>unsigned char</b> LCD_01_ADDRESS = 0x7E;  I2C_Lcd_Out(LCD_01_ADDRESS,1, 3, "Hello!");</pre>   |

| I2C_Lcd_Chrr       |   |
|--------------------|---|
| <b>Prototype</b>   | <b>void</b> Lcd_Chrr( <b>unsigned char</b> I2C_Address, <b>unsigned char</b> row, <b>unsigned char</b> column, <b>unsigned char</b> out_char);  |
| <b>Returns</b>     | Nothing.  |
| <b>Description</b> | <p>Prints character on Lcd at specified position. Both variables and literals can be passed as a character.</p> <p>Parameters :</p> <ul style="list-style-type: none"> <li>• I2C_address:the address of the I2C PCF8574 / A</li> <li>• row: writing position row number</li> <li>• column: writing position column number</li> <li>• out_char: character to be written</li> </ul> |
| <b>Requires</b>    | The Lcd module needs to be initialized. See <a href="#">I2C_Lcd_Init</a> routine.   |
| <b>Example</b>     | <pre>// Write character "i" at row 2, column 3: <b>unsigned char</b> LCD_01_ADDRESS = 0x7E;  I2C_Lcd_Chrr(LCD_01_ADDRESS ,2, 3, 'i');</pre>   |

|                    |   |
|--------------------|---|
| <b>Prototype</b>   | <b>void</b> I2C_Lcd_Cmd( <b>unsigned char</b> I2C_Address ,Lcd Command,1);  |
| <b>Returns</b>     | Nothing.  |
| <b>Description</b> | <p>Sends command to Lcd.</p> <p>Parameters :</p> <ul style="list-style-type: none"> <li>• I2C_address: <b>the address of the I2C PCF8574 / A</b></li> <li>• Lcd Command: writing Lcd Command</li> <li>• constant: 1 has no value in this context as reuse of function for other cmd</li> </ul> <p><b>Note :</b> Predefined constants can be passed to the function, see Available Lcd Commands.</p> |
| <b>Requires</b>    | The Lcd module needs to be initialized. See <a href="#">I2C</a> _Lcd_Init table.  |
| <b>Example</b>     | <pre>// Clear Lcd display: <b>unsigned char</b> LCD_01_ADDRESS = 0x7E;  I2C_Lcd_Cmd(LCD_01_ADDRESS, _LCD_CLEAR, 1);</pre>   |

**Available Lcd Commands**

```
typedef enum{ Lcd Command}Cmd_Type;
```

```
extern Cmd_Type Cmd; //this enum variable must be declared in the main source code
```

| Lcd Command                   | Purpose   |
|-------------------------------|---|
| <b>_LCD_FIRST_ROW</b>         | Move cursor to the 1st row  |
| <b>_LCD_SECOND_ROW</b>        | Move cursor to the 2nd row  |
| <b>_LCD_THIRD_ROW</b>         | Move cursor to the 3rd row  |
| <b>_LCD_FOURTH_ROW</b>        | Move cursor to the 4th row  |
| <b>_LCD_CLEAR</b>             | Clear display   |
| <b>_LCD_RETURN_HOME</b>       | Return cursor to home position, returns a shifted display to its original position. Display data RAM is unaffected. |
| <b>_LCD_CURSOR_OFF</b>        | Turn off cursor   |
| <b>_LCD_UNDERLINE_ON</b>      | Underline cursor on   |
| <b>_LCD_BLINK_CURSOR_ON</b>   | Blink cursor on   |
| <b>_LCD_MOVE_CURSOR_LEFT</b>  | Move cursor left without changing display data RAM  |
| <b>_LCD_MOVE_CURSOR_RIGHT</b> | Move cursor right without changing display data RAM   |
| <b>_LCD_TURN_ON</b>           | Turn Lcd display on   |
| <b>_LCD_TURN_OFF</b>          | Turn Lcd display off  |
| <b>_LCD_SHIFT_LEFT</b>        | Shift display left without changing display data RAM  |
| <b>_LCD_SHIFT_RIGHT</b>       | Shift display right without changing display data RAM   |
